

INTRODUCTION TO MEDICAL SKIN NEEDLING

Skin Needling is a skin renewal technique to restore the healthy youthful appearance of your skin at a fraction of the cost and with minimal or zero downtime.

Skin Needling produces similar results to Dermabrasion, Lasers and Deep Chemical Peels, but is much less invasive and does not require the removal of the epidermis. As a result the healing time is significantly shorter and there is no post-treatment skin sensitivity to UV light.

Skin Needling is also one of the few skin therapies that are suitable for treating all skin types, including ethnic skin, and which can be used to treat the fragile skin around the eyes, mouth and on the neck.

SkinRölla Skin Needling procedures are performed in a very safe and precise manner with the use of single-use sterile SkinRölla Titanium Dermalroller. The procedure is normally completed within 30-45 minutes.

Each fee paying delegate will be given a starter pack containing two dermal rollers, serums and local anaesthetic cream.

14:00	Registration & Introductions
